

# About Astec Paints Victoria

## Suppliers & Users of Energy Star Products

**Astec Paints Victoria** is headed up by Mike Bailey, an experienced trade expert who established his Paint Services business in 1994 and has spent many years in researching and understanding the best paints and coatings for the Australian climate. Rapid growth has seen expansion through Melbourne, Victoria and niche areas of Australia. The business is committed to providing and recommending Astec Paints coatings, renders, textures and waterproofing products, in response to the needs of the building industry.

### Australian made, researched and tested for Australian climates

**Astec Paints** have used reflective technology in its development of Energy Star exterior paints and coatings that effectively combat harsh climate conditions. Whilst reflecting heat, membrane products are also highly flexible and substrates stay cooler and create less expansion and contraction. The substantial efficiencies this can provide in cooling buildings, provides a genuine alternative to bulk insulation with measurable cost savings in many areas.

- Lower internal building temperatures by 15-20%*
- Downsize cooling equipment*
- Reduce Energy bills by up to 50%*
- Cut greenhouse gas emissions*

The clear benefits of the **Energy Star** range have been formally, and exclusively, recognised with Code Mark by the Building Codes of Australia. Following testing of all aspects of the **Energy Star** paint range, including solar absorbance and emissivity figures, approval has been granted by the Building Codes of Australia under the Energy Efficiency Section.

This certification ensures these products can be safely and confidently recommended and used throughout the Australian Building Industry.

**Astec Paints Victoria** employs fully trained trade staff proficient in the application of these products, who are committed to the ongoing effectiveness and compliance of the Energy Star product range.
