

Letters and Testimonials.... Mike Bailey Paint Services & Energy Star

Following an extremely hot summer, I contacted Mike Bailey Paint Services who highly recommended using Energy Star Heat Reflective roof paint. Mire assured me that the heat paint would not break down for many years and would make a considerable difference to energy costs during the summer months. Neighbors on both sides have commented on how good the roof now looks, and I believe that it has improved the value of my home. Both my wife and I are extremely pleased with the result.

Max Irving, Merrigum - 3 March 2009

A friend of mine recommended using Energy Star heat reflective coatings to paint the garage which has been turned into a bungalow for my son. When the job was completed, just in time for 47° heat, I was pleasantly surprised at how much cooler the bungalow was. I never believed a coat of paint could have made such a difference!

Joy Fitzgerald, Shepparton – 18 February 2009

Mike Bailey Paint Services has just completed a major painting contract on my home in Marungi Street, Shepparton. My wife and I are more than happy with the quality of the work carried out. We were comfortable in leaving our home in the care of Mike's employees during the course of the contract. We would be happy for any person giving consideration to using Mike Bailey's team in the future to inspect the work done at our home.

Peter Ross-Edwards - October 2008

At K20 Architecture we are always looking for quality products and services. Our client base ranges from hospitals to schools throughout Victoria and we pride ourselves in being environmentally focused. We are extremely happy with the quality of work. Our work environment is much more comfortable during the summer months. As we are environmentally focused Architects, it is satisfying to know we have used products that are low in VOC's and will not need to be painted for more than 20years. Our maintenance and energy costs have been greatly reduced. The colour range is extensive and very easy to work with. We are proud to refer Mike Bailey Paint Services and Energy Star Paints to our clients.

Theodore Kerlidis - 2 November 2008

At Shepparton Private Hospital.....we have recently used the Astec reflective paint through Mike Bailey painting as a means to improve comfort levels in the Executive Portable and one of the Patient Wards. In a time where business needs to consider its impact on the environment, we see this as a necessary and practical way to reduce the need for one of the main electricity consumers in our organisation.

The remarkable thing is the feel of the paint on hot days. To put your hand on the surface of the painted tin roof and feel how cool it is on a hot day is amazing. With the results we have seen and the range of colours that are available I was convinced enough to use it on my own roof at home.

Chris Thompson, CEO - 29 January 2007
